

Position Description

Form No: ASIA-HR-FM-001

POSITION DETAILS			
Position Title	Senior Front End Developer		
Business Unit	Information Technology		
Team	Development		
Position Reports To	Lead Full Stack Developer		
Location	City Support Centre – Kuala Lumpur		
Classification/Grade	Employment Contract		
Employment Type	Full Time		
Employee's (FTEs)	1	Number of Direct Reports	0
Relationships	Internal: - All team members across City Holdings Group - Internal customers		
	External: - Consultants - Contractors - Customer Business Support		
Special Requirements	N/A		

BUDGETARY			
Operating Budget	Not applicable	Revenue Budget	Not applicable
Capital Budget	Not applicable		

POSITION SUMMARY
The Senior Front End Developer provides technical stewardship and architectural leadership for Angular-based web platforms, ensuring high standards of maintainability, performance, accessibility, and user experience. This role delivers scalable, secure, and user-centric front-end solutions, acts as a subject matter expert for modern web development, and provides technical leadership through hands-on development, code quality ownership, mentorship, and cross-functional collaboration, while driving continuous improvement and front-end quality standards.

KEY SELECTION CRITERIA	
Qualifications	▪ Bachelor of Computer Science (equivalent or higher) ▪ Minimum 5 years experience in front end development and minimum 2 year experience in senior role
Experience/Expertise	<u>Essential Technical Skills & Experience</u> ▪ HTML5, CSS3, JavaScript/TypeScript expertise with a strong emphasis on semantic markup, maintainable UI architecture, and modern front-end best practices. ▪ Advanced CSS capability, including Flexbox, Grid, responsive design, theming, and performance-conscious styling approaches. ▪ Strong understanding of browser behaviour and performance, including rendering pipelines, reflow/repaint optimisation, and cross-browser compatibility. ▪ Experience with modern Web APIs (e.g. IntersectionObserver, ResizeObserver) to improve application performance and user experience. ▪ Advanced Angular framework mastery, with deep architectural understanding across the Angular ecosystem, including Standalone Components, complex Dependency Injection patterns, and migration of legacy module-based applications. ▪ Enterprise-scale Angular application design experience, delivering scalable, secure, and maintainable front-end solutions. ▪ CI/CD and build pipeline expertise, including configuration and optimisation of automated Angular build pipelines, quality gates (linting, unit and E2E testing), environment management, and build artefact optimisation. ▪ Enterprise state management experience, with strong judgement in applying global state libraries versus local, service-based, or signal-driven state solutions. ▪ Proven Angular performance optimisation capability, including effective use of Change Detection strategies, lazy loading, bundle size reduction, and modern Angular performance features. ▪ Advanced component design and reusability skills, including development of reusable UI libraries and use of content projection, dynamic components, and structural directives. ▪ Strong testing and quality assurance experience, including unit, integration, and end-to-end testing within Angular applications. ▪ Monorepo (Nx) experience, managing shared libraries, enforcing module boundaries, and supporting multiple Angular applications. <u>Professional Attributes & Soft Skills</u> ▪ Analytical Skills: Strong analytical thinking and problem-solving skills; ability to analyse problems, develop and propose solutions. ▪ Work Ethic: Self-driven and able to work autonomously or within a team and cross teams. Team player and take accountability for delivering results. ▪ Mindset: Proactive, Quality and Solution oriented ▪ Communication: Excellent written and verbal communication skills with team members and stakeholders. ▪ Adaptability: Adaptability and responsive to change <u>Leadership & Soft Skills</u> ▪ Technical Mentorship & Code Standards: Demonstrated ability to lead code reviews, specifically identifying Angular anti-patterns. A track record of mentoring junior and peer developers in the "Angular Way." ▪ Architectural Decision Making: Ability to translate business requirements into technical specifications, making pragmatic decisions on when to adopt new Angular features (e.g., Signals) versus maintaining stability.

Key Result Areas	Key Responsibilities
Architecture (10%)	- Apply established solution architecture, coding standards, and front-end patterns in day-to-day development. - Collaborate with the Lead Full Stack Developer and DevOps teams to support architectural decisions and ensure effective implementation. - Provide technical input that aligns with business requirements, security standards, and architectural guardrails. - Maintain awareness of the overall solution architecture and how front-end components integrate within it.
Leadership	- Support technical decision-making through code reviews, design discussions, and practical recommendations. - Promote front-end best practices, modern patterns, and quality standards within the team. - Provide guidance to team members on complex front-end issues and contribute to continuous improvement. - Assist in production issue troubleshooting, including higher-priority incidents when required.
Development & Documentation	- Design and develop high-quality, maintainable user interfaces using semantic HTML, modern CSS, and TypeScript. - Apply responsive design, theming, and accessibility best practices to deliver consistent user experiences. - Contribute across the software development lifecycle, including requirements analysis, estimation, development, testing, deployment, and production support. - Work within agile delivery frameworks, contributing to sprint planning, reviews, and continuous improvement initiatives. - Maintain clear and accurate technical documentation related to front-end functionality and configuration. - Adhering to City's IT Ways of Working procedures and process
Performance, Security & Quality	- Apply front-end performance optimisation techniques, including browser rendering considerations and efficient use of Web APIs. - Support adherence to front-end security best practices, including protection against common vulnerabilities (e.g. XSS, CSRF). - Contribute to reliable, secure integration between front-end applications and backend services. - Use logging, monitoring, and telemetry tools to support application reliability and performance monitoring.
Product Support	- Support production systems to ensure availability, performance, and reliability, responding to incidents within defined SLAs. - Collaborate with development and operations teams to diagnose issues and implement sustainable fixes. - Participate in root cause analysis and contribute to improving system resilience and support processes. - Assist with deployments, releases, and routine system maintenance activities.

VALUES & BEHAVIOURS

ThinkSafe	We always put health and safety first.
One Team	We support, value and respect each other.
Working in Partnership	We listen to our partners and exceed their expectations daily.
Lead the Way	We continually seek to drive innovative solutions.
Can Do	We own it, commit to it and deliver it with pride.

CORE COMPETENCIES

Core competencies as defined within City Values and Competency Needs Analysis

PHYSICAL DIMENSIONS

- Ability to work in an office environment that involves sitting and/or standing at a workstation
- Ability to use standard IT equipment, including a monitor, mouse and keyboard
- Ability to use office stairs (or take shelter in stair well in the event of a building emergency evacuation)
- Ability to wear a facemask inline with government directives

HSEQ / CITY MANAGEMENT SYSTEM REQUIREMENTS

- Ensure compliance with all relevant City Management System (CMS) policies & process requirements
- Behave in a responsible manner, that ensures actions do not adversely affect the health and safety of yourself, colleagues, contractors, partner representatives or members of the public
- Report detected process nonconformities or opportunities for improvement to management for review and action.
- Immediately report any incident or potential hazard to their manager (and partner representative when on partner premises)
- Correctly utilise facilities, equipment and systems provided by City or partners to control HSEQ risks.
- Comply with all HSEQ directives and instructions
- Participate in HSEQ training and initiatives implemented by City or partners
- Co-operate with respect to any action taken by City to comply with requirements imposed by partners and relevant compliance obligations (e.g. legislation)

TEAM MEMBER ACKNOWLEDGEMENT

I hereby accept the position as outlined in the above points and agree to follow City's Policies and Procedures. I understand the above Position Description is designed to provide a guide to the responsibilities and activities to be undertaken in this position. This is not intended to be an exhaustive list and is not exclusive of additional responsibilities as elements may vary from time to time.
